DETAILED ACTION

Election/Restriction

1. Applicant's election of Group II, claims 2-8 in Paper No. 7 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Oath/Declaration

2. The oath/declaration filed on 08/30/2001 is acceptable.

Drawings

3. The drawings are objected to under 37 CFR 1.83(a) because figure 4 fails to show the exact locations and boundaries of the various regions formed in the substrate due to the black background of the drawing. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Art Unit: 2811

4. Figure 5 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Information Disclosure Statement

5. If applicant is aware of any relevant prior art, he/she requested to cite it on form PTO-1449 in accordance with the guidelines set forth in M.P.E.P. 609.

Specification

6. The abstract of the disclosure is objected to because the claims are directed to a method of making a device, whereas the abstract describes a device. Correction is required. See MPEP § 608.01(b).

7. Claim 8 is objected to because of the following informalities: Claim 8 recites the limitations: "the main current", "the saturation current", "the resistor", "the p+ regions" and "the diodes" in lines 1-3. There is insufficient antecedent basis for this limitation in the claim.

Appropriate correction is required.

Art Unit: 2811

Claim Rejections - 35 USC § 102

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

9. Claims 2-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Ham(5,903,420).

Ham teaches in figure 7 and related text a method of increasing the holding voltage of a LVTSCR like structure comprising providing an alternative current path through a p well of the structure, defining a lower resistance current path than the p well and takes the form of at least one p-n junction diode 40, 42 formed in the p well, wherein the alternative current path becomes the main current path when the current through the LVTSCR exceeds the saturation current through the resistor formed by the p well and the p+ regions of the diodes.

Regarding the claimed limitation of an alternative current path becomes the main current path when the current through the LVTSCR exceeds the saturation current through the resistor formed by the p well and the p+ regions of the diodes, this feature is inherent in Ham's device because Ham's structure is identical to the claimed structure.
